

TRAILER PARKING LOT - PLAN

Trailers angled in. 2-2.5 parking stalls between trailers. Clubs have stall-width space on both sides of trailer. No space in front. Need cones for trailer spacing.

These 2 are basically parallel to tree line so that fire access is wide enough.

“NO TRAILER” CLUBS ONLY! Car-toppers that have a club with a trailer need to put boat near trailer.

Trailers straight in. 1-1.5 parking stalls between trailers. Clubs have space directly in front of trailer. Need cones for trailer spacing as well for frontage (fire regulations).

All towing vehicles must be parked in the overflow lot.
